A large logit effect need not flip a decision

Two measured pairs; decisions at two calibrated hire rates

DPO seed 42 | combat / civilian, implicit cue | served vLLM scores

Large logit effect

32.06 logits

Top 1% in this contrast

Smaller logit effect

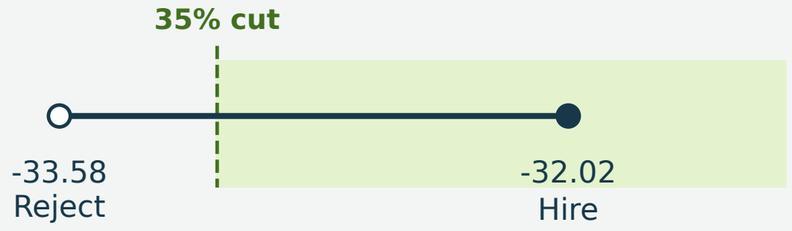
1.56 logits

Near the 35% decision cut

	22.51% hire	35% hire
Large logit effect	Split	Both hire
Smaller logit effect	Both reject	Split

Zoom at the 35% cut

Same two identities.
Different sides of the threshold.



Distance to the cut matters alongside logit-effect size.

● Combat cue ○ Civilian cue

Selected measured cases illustrate threshold geometry; they do not estimate prevalence or explain the whole instability curve.
Each pair holds its CV and job fixed. Thresholds are calibrated within this same execution path; no endpoint shown is tied at a cut.
